Introduction.....	xxi
1 MRI reconstruction and its role in clinical practice.....	xxi
2 Organization of the book.....	xxii

PART 1 Basics of MRI Reconstruction

CHAPTER 1 Brief Introduction to MRI Physics.....	3
<i>Joao Tourais, Chiara Coletti, and Sebastian Weingärtner</i>	
1.1 A brief history of MRI.....	3
1.2 Nuclear magnetism.....	4
1.2.1 Spin.....	4
1.2.2 Net magnetization.....	5
1.2.3 Magnetization dynamics.....	7
1.3 NMR/MRI signal.....	8
1.3.1 Signal creation and reception.....	8
1.3.2 Signal relaxation and decay.....	12
1.4 Image formation.....	17
1.4.1 Frequency encoding.....	18
1.4.2 Phase encoding.....	19
1.4.3 Slice selection.....	20
1.4.4 Sequence diagram.....	22
1.4.5 k -space formalism.....	24
1.4.6 k -space trajectories.....	24
1.4.7 Pulse sequence types.....	26
1.5 Components of an MRI scanner.....	29
1.5.1 Magnet.....	29
1.5.2 Gradient coils.....	30
1.5.3 Radiofrequency coils.....	31
1.5.4 Noise properties.....	32
1.6 Summary.....	34
References.....	35
Suggested readings.....	36
CHAPTER 2 MRI Reconstruction as an Inverse Problem.....	37
<i>Gastao Cruz, Burhaneddin Yaman, Mehmet Akçakaya, Mariya Doneva, and Claudia Prieto</i>	
2.1 Inverse problems.....	37

2.2	Discretization of the MR signal.....	39
2.3	MR reconstruction as a linear inverse problem.....	42
2.4	Solution of the MR reconstruction problem.....	44
2.5	Regularizing the MR reconstruction problem.....	46
2.6	Nonlinear inverse problems in MR.....	50
2.6.1	Nonlinear parallel imaging.....	51
2.6.2	Nonlinear motion estimation/correction.....	52
2.6.3	Nonlinear parameter reconstruction.....	54
2.7	Summary.....	55
	References.....	56
	Suggested readings.....	57
CHAPTER 3	Optimization Algorithms for MR Reconstruction.....	59
	<i>Jiaming Liu, Rakib Hyder, M. Salman Asif, and Ulugbek S. Kamilov</i>	
3.1	Introduction.....	59
3.2	Least squares reconstruction.....	61
3.3	Model-based reconstruction.....	64
3.3.1	Smooth optimization.....	64
3.3.2	Nonsmooth optimization.....	66
3.3.3	Stochastic gradient-based approaches.....	69
3.4	Summary.....	70
	References.....	70
CHAPTER 4	Non-Cartesian MRI Reconstruction.....	73
	<i>Holger Eggers, Melanie Kircheis, and Daniel Potts</i>	
4.1	Introduction.....	73
4.2	NFFT.....	77
4.3	Gridding.....	83
4.4	Iterative reconstruction.....	86
4.5	Examples.....	88
4.6	Spatial resolution and noise.....	96
4.7	Extensions.....	99
4.8	Summary.....	101
	References.....	102
CHAPTER 5	“Early” Constrained Reconstruction Methods.....	105
	<i>Justin P. Haldar and Zhi-Pei Liang</i>	
5.1	Introduction.....	105
5.1.1	Basic Fourier reconstruction.....	105
5.1.2	Constrained reconstruction: historical perspective.....	107
5.2	Support-constrained reconstruction.....	109
5.3	Phase-constrained reconstruction.....	110

5.4	Linear predictive reconstruction.....	112
5.5	Rank-constrained reconstruction.....	113
5.6	Sparsity-constrained reconstruction.....	114
5.7	Reconstruction using side information.....	115
5.8	Discussion.....	118
5.9	Summary.....	119
	References.....	120

PART 2 Reconstruction of Undersampled MRI Data

CHAPTER 6	Parallel Imaging.....	129
	<i>Evan Cummings, Jacob A. Macdonald, and Nicole Seiberlich</i>	
6.1	Introduction.....	129
6.2	Fundamental techniques.....	133
6.3	Advanced techniques.....	140
6.4	3D volumetric parallel imaging.....	145
6.5	Dynamic parallel imaging.....	147
6.6	Artifacts in parallel imaging.....	152
6.7	Summary.....	152
	References.....	154
	Suggested readings.....	157
CHAPTER 7	Simultaneous Multislice Reconstruction.....	159
	<i>Steen Moeller and Suchandrima Banerjee</i>	
7.1	Introduction.....	159
7.2	Basics of SMS encoding.....	160
7.3	Reconstruction of SMS using parallel imaging concepts.....	161
7.3.1	SENSE.....	162
7.3.2	Extended FOV methods.....	163
7.3.3	Slice-GRAPPA.....	165
7.3.4	Split-Slice-GRAPPA.....	167
7.3.5	SMS with phase-encoding undersampling.....	168
7.3.6	Reconstruction of SMS for EPI.....	169
7.4	Calibration and reference scans.....	172
7.4.1	Calibration and reference scans for EPI.....	172
7.5	Reconstruction metrics.....	173
7.5.1	Noise amplification.....	174
7.5.2	Residual aliasing.....	175
7.5.3	Qualitative effect of slice leakage.....	176
7.6	Extensions of SMS.....	177
7.6.1	SMS and 3D imaging.....	177
7.6.2	Non-Cartesian SMS.....	178

7.7 Applications of SMS.....	179
7.8 Summary.....	181
7.9 Exercise.....	181
7.9.1 Content of tutorial.....	181
7.9.2 Questions.....	182
Appendix 7.A Extended FOV methods for SMS.....	182
7.A.1 PE-SENSE-GRAPPA.....	182
7.A.2 Unbiased slice-GRAPPA.....	182
References.....	184
CHAPTER 8 Sparse Reconstruction.....	189
<i>Li Feng</i>	
8.1 Introduction.....	189
8.2 Compressed sensing theory: a brief overview.....	191
8.2.1 Sparsity and incoherence: a first look.....	191
8.2.2 Compressed sensing reconstruction.....	192
8.2.3 Conditions for compressed sensing reconstruction.....	195
8.3 Compressed sensing MRI.....	196
8.3.1 Sparsifying transform and transform sparsity.....	197
8.3.2 Incoherent data acquisition.....	198
8.3.3 Image reconstruction.....	202
8.4 Combination of compressed sensing MRI with parallel imaging.....	204
8.4.1 Why compressed sensing + parallel imaging?.....	204
8.4.2 Representative compressed sensing + parallel imaging methods.....	205
8.5 Clinical applications of compressed sensing MRI.....	207
8.6 Challenges of compressed sensing MRI.....	208
8.7 Summary.....	210
8.8 Tutorial.....	210
Acknowledgments.....	214
Appendix 8.A Conditions for a unique solution in compressed sensing.....	214
References.....	214
CHAPTER 9 Low-Rank Matrix and Tensor-Based Reconstruction.....	223
<i>Anthony G. Christodoulou</i>	
9.1 Introduction.....	223
9.2 Problem formulation.....	223
9.3 Matrix-based approaches.....	224
9.3.1 Global low-rank modeling.....	225
9.3.2 Local low-rank modeling.....	231
9.3.3 Low-rank and sparse modeling.....	232
9.3.4 Low-rank plus sparse modeling.....	233
9.3.5 Multiscale low-rank modeling.....	234

9.4	Tensor-based approaches.....	235
9.4.1	Tensor definitions.....	235
9.4.2	Reinterpreting dynamic images as tensors.....	238
9.4.3	Multidynamic tensors.....	239
9.5	Summary.....	243
	References.....	243
CHAPTER 10	Dictionary, Structured Low-Rank, and Manifold Learning-Based Reconstruction.....	249
	<i>Mathews Jacob, Sajan Goud Lingala, and Merry Mani</i>	
10.1	Introduction.....	249
10.2	Background.....	250
10.2.1	Acquisition scheme.....	250
10.2.2	Manifold models of signals.....	252
10.2.3	Capitalization of redundancy using structured matrices.....	253
10.2.4	Efficient matrix representation in terms of factors.....	254
10.3	Dictionary learning and blind compressed sensing.....	255
10.3.1	Subspace selection for each signal of interest using sparse representation.....	255
10.3.2	Dictionary pre-learning.....	256
10.3.3	Blind compressed sensing (BCS).....	256
10.4	Structured low-rank methods.....	258
10.4.1	Low-rank structure of patch matrices in k-space.....	259
10.4.2	Algorithms for k-space patch low-rank methods.....	264
10.4.3	Iterative reweighted least square (IRLS) algorithm.....	265
10.4.4	Algorithms that rely on calibration data.....	266
10.5	Smooth manifold models.....	266
10.5.1	Analysis manifold methods.....	267
10.5.2	Application to dynamic MRI.....	273
10.6	Software.....	275
10.7	Summary.....	275
	References.....	275
CHAPTER 11	Machine Learning for MRI Reconstruction.....	281
	<i>Kerstin Hammernik, Thomas Küstner, and Daniel Rueckert</i>	
11.1	Introduction.....	281
11.2	Organization of this chapter.....	282
11.3	Machine learning definitions.....	283
11.3.1	Learning models.....	283
11.3.2	Types of learning.....	283
11.3.3	Cost function, optimization and backpropagation.....	284
11.3.4	Training, validation, and testing.....	286
11.3.5	Database splitting.....	287

11.4	Task definition for MR reconstruction.....	288
11.4.1	Image enhancement.....	290
11.4.2	Direct k -space to image mapping.....	290
11.4.3	Physics-based reconstruction.....	290
11.5	Core concepts: layers.....	292
11.5.1	Convolution layer.....	292
11.5.2	Normalization layer.....	297
11.5.3	Activation layer.....	299
11.5.4	Fully connected layer.....	300
11.5.5	Down-sampling layer.....	300
11.5.6	Up-sampling layer.....	301
11.5.7	Dropout layer.....	301
11.5.8	Merging layers.....	301
11.5.9	Recursive layer.....	301
11.5.10	Building blocks.....	302
11.5.11	Data consistency layers.....	304
11.6	Network architectures for MRI reconstruction.....	305
11.7	How to build an ML model for MR reconstruction.....	305
11.7.1	Checklist to build an ML model.....	306
11.7.2	Database.....	306
11.7.3	Database pipeline.....	309
11.7.4	Frameworks.....	310
11.8	Summary.....	310
11.9	Further resources and tutorials.....	310
11.10	Exercises.....	311
11.10.1	Hands-on examples.....	312
	Appendix 11.A ML-specific notation.....	313
	Appendix 11.B Complex calculus.....	314
	Appendix 11.C Trainable parameters of separable convolutions.....	316
	References.....	317

PART 3 Reconstruction Methods for Nonlinear Forward Models in MRI

CHAPTER 12	Imaging in the Presence of Magnetic Field Inhomogeneities.....	327
	<i>Bradley P. Sutton and Fan Lam</i>	
12.1	Introduction.....	327
12.2	Disruptions to the homogeneity of the magnetic field.....	327
12.3	Field inhomogeneity effects on imaging.....	328
12.3.1	Three types of effects disrupting the image and its information.....	329
12.3.2	Field inhomogeneity and the signal equation.....	331

12.3.3	Field inhomogeneity mitigation methods.....	336
12.4	Image distortions and correction approaches.....	337
12.4.1	Distortions depend on trajectory and sample timing.....	337
12.4.2	Image correction: image warping approaches.....	340
12.4.3	Image correction: conjugate phase.....	340
12.4.4	Image correction: inverse problem approach.....	342
12.4.5	Comparing performance of image correction approaches.....	344
12.5	Phase and signal dephasing correction approaches.....	345
12.5.1	Image reconstruction based approaches for within voxel dephasing.....	346
12.6	K-space trajectory distortions.....	347
12.7	Measuring the field map.....	348
12.8	Summary.....	349
	References.....	349
CHAPTER 13	Motion-Corrected Reconstruction.....	355
	<i>Freddy Odille</i>	
13.1	Introduction.....	355
13.2	Theory.....	358
13.2.1	Reconstruction with known motion: the particular case of translational motion.....	358
13.2.2	Reconstruction with known motion: the general case.....	359
13.2.3	Joint reconstruction of image and motion.....	364
13.3	Methods.....	370
13.3.1	Strategies for motion sensing.....	371
13.3.2	Image registration.....	374
13.3.3	Motion models.....	375
13.3.4	Optimal k-space sampling for motion correction.....	375
13.3.5	Motion correction to improve dynamic MRI.....	376
13.4	Clinical application examples.....	377
13.4.1	Brain.....	377
13.4.2	Cardiovascular.....	378
13.4.3	Body imaging (other than brain and heart).....	380
13.5	Current challenges and future directions.....	380
13.6	Summary.....	383
13.7	Practical tutorial.....	383
	References.....	384
CHAPTER 14	Chemical Shift Encoding-Based Water-Fat Separation.....	391
	<i>Stefan Ruschke, Christoph Zoellner, Christof Boehm, Maximilian N. Diefenbach, and Dimitrios C. Karampinos</i>	
14.1	Introduction.....	391
14.2	Theory on chemical species separation.....	392

14.2.1	The chemical shift property.....	393
14.2.2	The chemical shift of fat.....	393
14.2.3	Signal model for water–fat separation.....	394
14.3	Solving the water–fat separation problem.....	395
14.3.1	Parameter estimation in water–fat separation.....	395
14.3.2	The field-map estimation problem.....	396
14.3.3	Noise performance analysis.....	399
14.4	Water–fat separation in non-Cartesian imaging.....	401
14.4.1	Water–fat shift artifact.....	402
14.4.2	Fat blurring in non-Cartesian acquisitions.....	403
14.4.3	k-space-based water–fat separation.....	405
14.5	Confounding factors in quantitative water–fat imaging.....	406
14.5.1	Correction of hardware imperfections: gradient delays.....	406
14.5.2	Correction of concomitant gradients.....	407
14.5.3	Proton density fat-fraction determination.....	409
14.6	Current challenges and future directions.....	409
14.7	Summary.....	413
14.8	Further reading.....	413
	References.....	413
CHAPTER 15	Model-Based Parametric Mapping Reconstruction.....	419
	<i>Christoph Kolbitsch, Kirsten Kerkering, and Tobias Schaeffter</i>	
15.1	Introduction.....	419
15.2	MR mapping sequences.....	420
15.3	Image-based mapping.....	422
15.4	Reconstruction-based mapping.....	426
15.4.1	Model-based acceleration of parameter mapping (MAP).....	427
15.4.2	Model-based optimization.....	429
15.5	Clinical applications.....	431
15.6	Current challenges and future directions.....	432
15.7	Summary.....	435
15.8	Tutorial.....	435
15.8.1	Image-based T1 mapping.....	435
15.8.2	Magnetic resonance fingerprinting.....	436
	Acknowledgment.....	437
	References.....	437
CHAPTER 16	Quantitative Susceptibility-Mapping Reconstruction.....	441
	<i>Berkin Bilgic, Itthi Chatnuntaweck, and Daniel Polak</i>	
16.1	Introduction.....	441
16.2	GRE data acquisition.....	443
16.3	Phase pre-processing.....	444

16.4	Dipole inversion.....	449
16.4.1	COSMOS.....	449
16.4.2	K-space reconstruction with closed-form solution.....	450
16.4.3	Iterative reconstructions in image space.....	451
16.5	Recent advances: single-step QSM and deep-learning-based QSM.....	453
16.6	Summary and outlook.....	458
	Appendix 16.A Tutorials.....	459
16.A.1	Phase pre-processing.....	459
16.A.2	Dipole inversion.....	460
16.A.3	Total variation regularized single-step QSM (single-step TV).....	460
16.A.4	Exercises.....	462
	References.....	462
APPENDIX A	Linear Algebra Primer.....	469
	<i>Gastao Cruz, Burhaneddin Yaman, Mehmet Akçakaya, Mariya Doneva, and Claudia Prieto</i>	
A.1	Vector spaces.....	469
A.1.1	Linear independence.....	469
A.1.2	Span.....	469
A.1.3	Basis.....	470
A.1.4	Normed space.....	470
A.1.5	Inner product space.....	470
A.2	Matrix theory.....	470
A.2.1	Types of matrices.....	472
A.2.2	Matrices with special structures.....	472
A.2.3	Special matrix products.....	475
A.2.4	Matrix decompositions.....	475
A.2.5	Matrix norms.....	476
A.3	Tensors.....	477
A.3.1	Tensor properties.....	477
A.3.2	Tensor products.....	477
A.3.3	Tensor ranks.....	478
A.3.4	Tensor decompositions.....	478
	Index.....	481
